

PHOTOGRAPH ALBUM SYSTEM

ABSTRACT OF THE DISCLOSURE

1 A photograph album system (10) has a spine (14) with
2 an internal lateral groove (30) at one end and a removable
3 retainer (42) having a plurality of internal retaining
4 fingers (44) within the groove. A plurality of pages (52)
5 are defined by a plurality of signatures (54). Each
6 signature is defined by a plurality of page sets (56).
7 Each page set consists of an interior support sheet (58)
8 with a central fold (60) and a pair of exterior cover
9 sheets (64). The exterior cover sheets are folded around
10 an individual outer edge of an interior support sheet with
11 each having a central fold defining an outer bend (66).
12 The exterior cover sheets are adhered to the interior
13 support sheet so that two pages are formed with separate
14 pockets (72) on each side of each page. Posts (36) couple
15 the pages to the spine.
